

CASE STUDY: WILLOW GLEN RV RESORT

New Alta Labs Outdoor Access Points Provide WiFi at Campground Resort

Willow Glen RV Resort in Cedar City, Utah recently deployed over 40 Alta Labs AP6-Pro-Outdoor Access Points across over 40 RV stalls. The owner of the resort wanted to ensure that there was maximum WiFi coverage throughout the entire resort. InfoWest partnered with Alta Labs to ensure the WiFi coverage blanketed every single bay.

AP6-Pro-Outdoor Front View

InfoWest dropped a fiber connection to the pedestal for every RV bay. The fiber connection plugs in to a media converter that connects via RJ45 to the AP6-Pro-Outdoor.

The Simplicity of AltaPass™

A major selling point for the RV Resort to use Alta Labs products was the AltaPass technology. The patented technology will allow every single RV owner to join a single wireless network (SSID), yet each will have their own unique password. When RV owners check in to the front desk, they'll be provided with this unique password that will be valid for the duration of their stay. Each RV owner can stay connected to their own private network on their mobile devices while moving throughout the resort.

CASE STUDY: WILLOW GLEN RV RESORT

The RF environment remains clean with the use of a single SSID and the complexity level for end users remains simple by connecting to one wireless network.

"What makes Alta Labs special is their flexibility. Whenever I had a request, I could talk to them, and we worked together to make it happen."

- Aaron Hutchings, IT Services Manager, InfoWest
